

The Education Center Pack meets the needs of universities and engineering schools which offer network, security and telecoms courses by providing them with the means to instruct students on network security tools. This document describes the details of this service range as well as the hardware and service support which NETASQ gives them in order to conduct these training courses in the best manner.

1

Who is the Education Center Pack for?

The Education Center Pack (PEC) is intended for all **universities and engineering schools** that instruct students in security and network technologies and in information systems in general. This service is recommended for universities and **engineering schools** that increasingly include an Information system security component in their training curriculum. As the **leading European vendor** in the sector, NETASQ wishes to provide students with all the **experience** it has acquired in the subject over the past ten years.

2

Which needs does this service address?

Our observation – Today the impact of professional training courses and certifications is indisputable. The **added value** that these courses and certifications represent is a major asset in seeking and securing a job in the various fields of industrial computer science and the associated services.

For this reason, NETASQ now offers support to students and their institutions by proposing a very concrete certifying training course on an innovative technology that has already succeeded in attracting many companies and institutions.

3

What does this service do for you?

Our offer – In the scope of the Education Center Pack, NETASQ proposes the training of lecturers and speakers in order for them in turn to impart their knowledge of our products and our technologies to senior-year students.

Throughout an 8-day full training plan, these instructors will be coached by one of our trainers.

The first 3 days will be dedicated to ADMINISTRATOR training, which they will later integrate in the scope of their own training courses. The next 4 days will be devoted to EXPERT training, so that they will be in a position to answer most of the specialized questions that students would be bound to ask them. The last day of training will be devoted to the educational approach regarding our products, as well as the administrative aspects (manipulating the certification tool).

The second aspect of this pack will allow you to acquire equipment at very attractive prices from NETASQ or from one of its distributors.

- 1 U120-NFR appliance, 9 U70-NFR appliances (including SEISMO)
- A 3-year maintenance pack for each appliance
- Unlimited access to downloads and product updates (all options)
- 60 attempts at the CNA (Certified NETASQ Administrator) certification examination.

4

Access to educational resources

Throughout the entire duration of this pack, you will benefit from access to educational resources that NETASQ produces for its certified training centers. This covers the supply of course material and multimedia presentations. You will also be able to share with trainers about the content and techniques that they use daily.

5

Educational follow-up

The training department remains at your disposal after each certification session in order to review the results obtained by students during the certification examination. A simplified e-mail will inform students of their status after the certification examination (within 72 working hours).

As for the instructor, he will receive a letter detailing the scores obtained by each candidate (within 72 working hours).

Where necessary, a meeting by telephone can also be arranged.

Contact the training department at +33(0)320 619 630 or at the address formation@netasq.com in order to subscribe to the Education Center Pack.
