

DIASA INFORMATICA ATTESTS TO THE ADVANTAGES OF MFILTRO, NETASQ'S MAIL SECURITY SOLUTION

Diasa Informática, wholesale leader in the Spanish IT market, further supports its strategy for continuous improvement by deploying MFILTRO, NETASQ's antispam, antivirus, antiphishing and antispyware dedicated appliance, to address Diasas's Internal needs

Ramón Moreno de Los Ríos,

DIASA's CEO

THE OBSERVATION :

The mail system is the key mode of communication between Diasa and its clients. Every day, hundreds of e-mails are exchanged.

Diasa's field teams are often on the move and check their e-mails on their telephones or PDAs from wherever they may be. For them, spam is a major pest because every unnecessary e-mail received means a waste of time and efficiency.

THEN:

Before having deployed MFILTRO, Diasa employees would receive as many as 200 spam messages in a day, which disrupted synchronization and caused unacceptably long waits during the transfer of e-mails to PDA's and mobile devices. This severely impacted employees' efficiency and made the user experience unpleasant—it even raised questions as to the usability of these devices.

NOW:

The results provided by NETASQ MFILTRO have been impressive and have allowed, among other benefits, resolving synchronization issues when e-mails are downloaded from employees' PDAs. Now, the duration of synchronizations has returned to normal, and being able to directly access the quarantine is a sign of trust.

Thanks to the efficiency of MFILTRO, we have improved our productivity, reduced the response time to our customers, and are now able to offer continuous and permanent service, regardless of our geographic location.."

Ramon Moreno de los Rios
