

NETASQ is renewing its **M**FILTRO range to give optimal and simplified protection thus ensuring companies' increased productivity

Up to 27 million e-mails treated and more than 99.7% of spam blocked

Paris, June 23, 2009

NETASQ, a pioneer and a player who has become a reference in the information security market, has announced the launch of its new **M**FILTRO 200 and **M**FILTRO 500 appliances as well as the renewal of the rest of its range – antispam appliances that simultaneously protect the network and the workstation with their different security protocols.

Between 1978, the year in which the first spam message was sent and today, where more than 130 billion undesirable e-mails are sent per day, the question of managing and securing mailboxes has become crucial regardless of structure size.

To meet the expectations of companies, NETASQ offers a range that allows combining:

- Exceptional performance: up to 27 million e-mails treated everyday
- Assurance that 99.7% of spam messages are blocked
- A solution that integrates cutting-edge technology, thereby allowing an increase in productivity
- Ease of use of the award-winning intuitive interface and installation wizard
- A very attractive price

This range ensures the security of organizations, regardless of their size, by offering models adapted to the needs of each structure type. For each structure size, there is a corresponding appliance with a name that represents the minimum number of addresses it manages:

- **M**FILTRO 200: up to 500 addresses
- **M**FILTRO 500: from 500 to 1000 addresses
- **M**FILTRO 1000: from 1000 to 3000 addresses
- **M**FILTRO 3000: from 3000 to 15 000 addresses

We have estimated at 19K€ the amount that a company with 50 employees can lose per annum because of spam.

If on a daily basis, an employee (earning an annual salary of 40K€) receives an average of 50 e-mails, of which 80% are spam, the time needed to delete the undesirable messages is 14 hours and 26 minutes every year, translating to a cost of more than 15 K€, to which 4K€ are added for indirect costs (bandwidth / storage/ IT intervention).

Turning to a cutting-edge technology antispam solution is a competitive advantage for companies that gain in terms of productivity just by being equipped.

But this should not come on the condition of complexity, and the MFILTRO range has been recognized for the great simplicity of its installation, use and maintenance.

Indeed MFILTRO appliances are easy to install in plug and play mode. The appliance can be configured in just a few minutes via the wizard that includes all the configuration steps.

MFILTRO antispam appliances enable a substantial and measurable improvement in productivity thanks to its consolidated dashboard.

Users can directly access their quarantine area in order to monitor it if necessary.

This simplicity allows lifting an important load off the administrator's shoulders and giving him full control over the security of the network.

For antivirus protection, all these systems are based on ClamAV and/or Kaspersky engines depending on the options subscribed.

*"The simplicity of use and the extremely competitive value for money of the whole MFILTRO range make us very optimistic about its commercial success,"* stated Pierre Calais, Vice President, Engineering and Operations.

#### **About NETASQ**

With more than 45,000 products sold worldwide to date via a distribution channel of more than 300 partners spread out in more than 30 countries, NETASQ has made a name for itself as a major player in the information security field. NETASQ solutions efficiently meet the needs that enterprises have for a unified form of protection from network threats and spam.
