

## NETASQ UNVEILS NETASQ EVENT ANALYZER (NEA), A NEW MONITORING AND DECISION-MAKING TOOL TO OPTIMIZE INFORMATION SECURITY

This latest tool provides decision-makers with better visibility over data, facilitating quick and efficient decision-making. As for administrators, they reap the benefits of task automation, the availability of a powerful analysis tool that offers 3-dimensional data views and management of access by role.

*Paris, September 28 2010*

NETASQ, a reference and pioneer in the information security field, announces the release of NETASQ EVENT ANALYZER (NEA). This solution was created in the opinion that for the proper management of network events, the analysis and understanding of traffic that passes through an information system must be allowed. Indeed, as various types of network events have their own specificities, reports that are sent have to be targeted at the people concerned in order to ensure better productivity and to provide real help in the decision-making process.

Thanks to NEA, the wealth of information provided guarantees compliance with the relevant legislation (HIPAA, SOX, Basel II, PCI-DSS) while ensuring data integrity and confidentiality. This new solution is the product of the partnership established between Click&DECiDE and NETASQ. Thus, NEA includes the solution published by BI, which had been selected for its powerful analyses.

*"For some time now, we had been aware of a real need for a decision-making tool, but we have decided to go much further by adding task automation features and most of all, productivity optimization. This is really a great leap forward with regards to security managers' peace of mind," said Dominique Meurisse, Executive Vice President, Sales and Marketing.*

### The main features:

- Follow-up on your security policy

NETASQ Event Analyzer automatically generates various types of activity reports, which are then sent to different categories of people concerned. This allows segmenting control of the internal security, thereby guaranteeing control over the security policy.

- Task scheduling (or productivity optimization)

The system administrator can configure the frequency with which reports are generated and sent to the right recipients. The scheduling of database maintenance tasks is another plus that will enable him to fully dedicate his time to his assignments.

- Wealth of treatments

NETASQ Event Analyzer offers more than 200 preconfigured and fully customizable reports. The treatment of events from a built-in syslog server or from event logs ensures full integration into your information system.

- Legal archival

The archiving feature ensures the integrity and confidentiality of archived data as well as the transfer to a storage server. Paired with the wealth of report information, NETASQ EVENT ANALYZER allows you to stay in compliance with the relevant legislation (HIPAA, SOX, BASEL II, PCI-DSS).

- Detailed log analysis  
Searching for specific information while performing a detailed analysis of security events is a tricky task that may take up a lot of time. NETASQ Event Analyzer aggregates data in three dimensions (OLAP technology) to allow easy manipulation in several specific data views. When you save your views and the related graphs, you will be able to reuse them with another set of data in order to gauge changes that have occurred over time.
- Provisioning of an intuitive and customizable portal  
NETASQ EVENT ANALYZER's web portal allows reports to be viewed or tasks to be scheduled. The creation of welcome pages enables dedicated information to be shared. Upon installation, this portal and tasks for generating summary reports are created so that the feature can be used immediately.

**About NETASQ**

With more than 60,000 products sold worldwide to date via a distribution channel of more than 750 partners spread out in more than 40 countries, NETASQ has made a name for itself as a major player in the information security field. NETASQ solutions efficiently meet the needs that enterprises have for a unified form of protection from network threats and spam.
